

wasuh_setup on ubuntu (1)

connect via PuTTY (or directly in the VM console) and run these commands:

Step 1: Update the system

```
sudo apt update && sudo apt upgrade -y
```

```
touch@ubuntu:~$ sudo apt update
[sudo] password for touch:
Ign:1 http://archive.ubuntu.com/ubuntu jammy InRelease
Ign:2 http://security.ubuntu.com/ubuntu jammy-security
InRelease
0% [Connecting to archive.ubuntu.com] [Connecting to security.ubuntu.com]
```

Step 2: Install required tools

```
curl -s0 https://packages.wazuh.com/4.12/wazuh-install.sh &&
sudo bash ./wazuh-install.sh -a
```

```
16/05/2026 14:32:35 INFO: --- Summary ---
16/05/2026 14:32:35 INFO: You can access the web inter
User: admin
Password: [REDACTED]
16/05/2026 14:32:35 INFO: Installation finished.
touch@ubuntu:~$
```

Step 3: Save the automatically generated passwords

During the installation, the script will print passwords for several users, for example:

SAVE THESE PASSWORDS IMMEDIATELY!

Step 4: Start wasuh server

```
sudo systemctl start wazuh-manager
sudo systemctl start wazuh-indexer
sudo systemctl start wazuh-dashboard
```

Step 4: Verify all services are running

```
sudo systemctl status wazuh-manager
sudo systemctl status wazuh-indexer
sudo systemctl status wazuh-dashboard
```

```
touch@ubuntu:~$ sudo systemctl start wazuh-manager
[sudo] password for touch:
touch@ubuntu:~$ sudo systemctl start wazuh-indexer
touch@ubuntu:~$ sudo systemctl start wazuh-dashboard
touch@ubuntu:~$ sudo systemctl status wazuh-dashboard
● wazuh-dashboard.service - wazuh-dashboard
   Loaded: loaded (/etc/systemd/system/wazuh-dashboard.service; enabled; vendor preset: enabled)
   Active: active (running) since Sun 2026-05-17 03:58:15 UTC; 7min ago
     Main PID: 682 (node)
       Tasks: 11 (limit: 5709)
      Memory: 306.4M
         CPU: 13.641s
    CGroup: /system.slice/wazuh-dashboard.service
            └─682 /usr/share/wazuh-dashboard/node/bin/node --no-warnings --max
```

All should show active (running).

Step 5: Accessing Wazuh Web Interface

From your **Windows** machine, open any web browser.

- If your VM is in **NAT mode**, go to: <https://10.0.2.15> (or the NAT IP you saw earlier)
- If your VM is in **Bridged mode**, go to: <https://192.168.x.x> (replace with the actual Bridged IP)

Your browser may warn about an insecure connection (self-signed certificate). Accept the risk and proceed.

Login with:

- **Username:** admin
- **Password:** the password saved during installation (for the admin user)

You should now see the Wazuh dashboard.

Default Wazuh ports to remember

Service	Port	Purpose
Wazuh Dashboard (web)	443	Web interface (HTTPS)
Wazuh API	55000	REST API

Wazuh Indexer (internal)	9200	Elasticsearch-compatible API
--------------------------	------	------------------------------

Troubleshooting

Problem	Solution
Connection refused	SSH not installed → Run in VM: <code>sudo apt install openssh-server -y</code>
Timeout / No route	Check VM network mode (Bridged works best). Try restarting VM.
Wrong IP	Run <code>ip a</code> in VM to confirm current IP
Firewall blocking	<code>sudo ufw allow 22</code> then <code>sudo ufw enable</code>

Wazuh dashboard not loading?

Check service status: `sudo systemctl status wazuh-dashboard`

Restart all services: `sudo systemctl restart wazuh-manager wazuh-indexer wazuh-dashboard`

View logs: `sudo journalctl -u wazuh-dashboard -f`

Forgot Wazuh admin password?

```
sudo /usr/share/wazuh-indexer/plugins/opensearch-security/tools/wazuh-passwords-tool.sh -u admin -p NEW_PASSWORD
```

VM has no internet (can't download Wazuh)

Check NAT mode in VirtualBox (Adapter 1 = NAT)

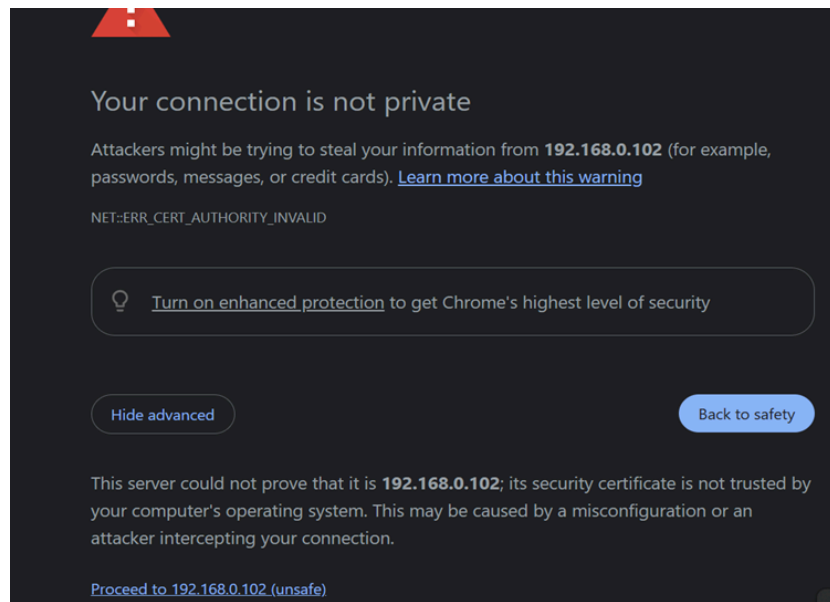

Test: `ping 8.8.8.8`

If no internet: VirtualBox → VM Settings → Network → Adapter 1 enabled, attached to NAT.

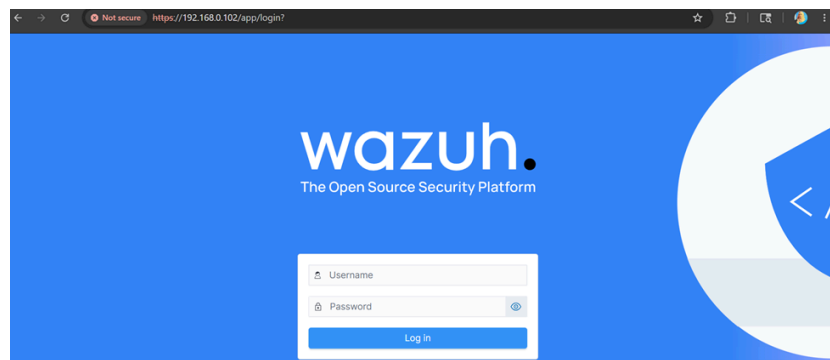

Quick Reference Card

Item	Value
Ubuntu username	[your-chosen-username]
Ubuntu password	[your-chosen-password]
VM IP (bridge)	192.168.0.102

Wazuh web UI	https://[VM-IP]:443
SSH Port	22

Go advance → proceed to 192.168.0.102

Wazuh web login admin + [wazuh-admin-password]
